Plasma WEGA Television

— go create

SONY

Love at first sight

You don't need to be an incurable romantic to fall head over heels in love with Sony's new Plasma WEGA televisions.

Anyone who appreciates beautiful design will relish the ultra slim-line form with brushed silver finish. The high-resolution, widescreen flat panel is neatly integrated with a tuner and stereo speakers – ideal for the more practical at heart.

In other words, the new Plasma WEGA series is the picture-perfect marriage of great looks and technical innovation that sets pulses racing. ■

Design

A new beautiful design with discrete Sony styling

Integration

Integrated tuner and stereo speakers together in a breathtaking design

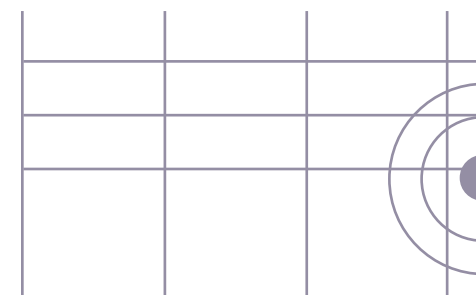

Solution

Easy placement of the Plasma WEGA TV thanks to the table-top stand

Universal remote

For full control of your Plasma WEGA TV and DVD player or VCR

Breathtaking visuals

Plasma WEGA TVs are at the pinnacle of today's visual imaging technology. The high resolution Plasma panels deliver the best-possible picture reproduction, with the finest details. Sony's 'Real Digital System' displays the sharpest and most accurate images.

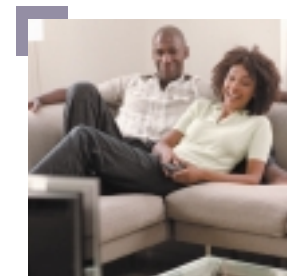

Fully digital, right up to the plasma panel, this unique Sony technology creates high quality images without motion artefacts from any signal source. So whether you are watching TV, or the latest movie on DVD or video, you will enjoy smooth, natural images.

Real Digital System

The Bi-Pixel conversion technology of the 'Real Digital System' delivers an outstanding cinematic viewing experience by automatically detecting and minimizing motion artefacts, resulting in natural moving images and precise, detailed images, regardless of the video source.

Bright and brilliant colour reproduction and improved contrast further enhance your viewing pleasure. The Plasma panel is capable of displaying 16.7 million colours, making on-screen hues more true to life, while the high contrast ratio brings exceptional images to your screen at all times.

Sony's innovative design takes advantage of Plasma technology to offer a wide viewing angle up to 160°, which means maximum viewing flexibility and a truly involving cinematic experience.

Giving it all

The Plasma WEGA TVs feature integrated stereo speakers and tuner, giving you everything you need for a full multimedia experience in a single location. There is no need for an additional media box or TV tuner. A true 'plug and play' TV set, the Plasma WEGA range means easier set-up and neat cable management.

The convenience of Sony's 'all-in-one' set-up is not the only advantage of this approach. Thanks to the ingenuity of the Plasma WEGA engineers, the speakers are located underneath the screen, allowing you to save valuable space in your living room, and position the TV in tight corners.

And as you'd expect from Sony, the sound quality is excellent too. The integral speakers use TruSurround™ technology to reproduce virtual surround sound without the need for additional loudspeakers. And a Stereo Output and Sub Woofer Output allow you to connect your Plasma Wega to an external audio system.

Ease of use

Thanks to the table-top stand, these Sony Plasma WEGA TVs can be placed virtually anywhere. Since this stand matches the design of the main unit, it not only helps conceal the cable connections but also contributes to an elegant, stylish look when the TV is placed in the living room.

For both models, Sony also offers the option of a superb, stylish glass AV stand that can store additional Home Entertainment equipment – like DVD player and AV receiver – and will fit comfortably into any room.

These Plasma WEGA TVs also include a universal remote control, giving full control of the TV and all Sony's DVD players – from the comfort of your armchair.

Look to the future, together

Plasma WEGA TVs allow you to connect to devices such as DVD player, video recorder, camcorder, satellite receiver, set-top box and Sony PlayStation. You can even connect to a personal computer, a delight for serious 'gamers' and those internet users who enjoy video streaming over a broadband network.

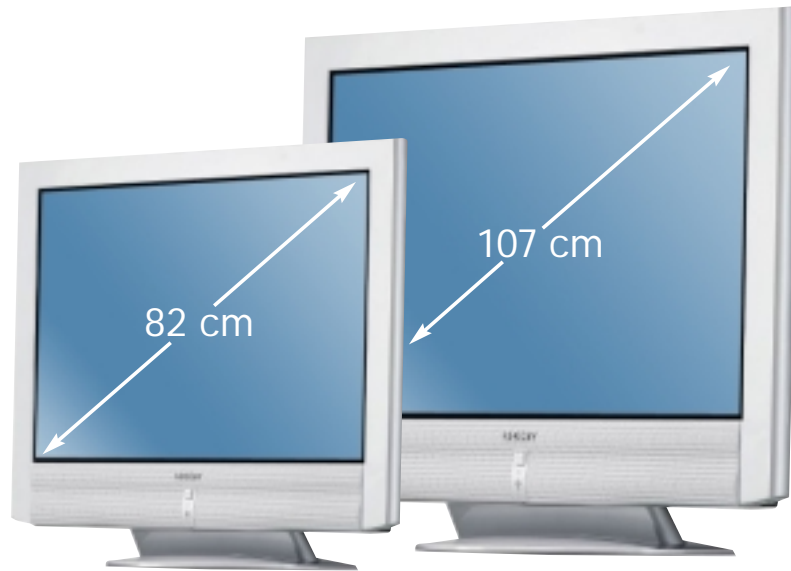

Whatever the application, or however you wish to use your new Plasma TV you're assured of perfect viewing for as long as you care to imagine.

And whatever the source, these models provide high-impact pictures and audio that stay in the memory long after the show has finished, making you yearn for another Plasma Wega TV experience as soon as possible.

After all, people do say that absence makes the heart grow fonder.
